Column `Perl' denotes if the library supports advanced perl-compatible syntax, such as word boundaries and back reference. Column `Light' shows whether the library is implemented in two files: a header and a source file.

Perl Documentation - Perldoc Browser

Perl provides numerous special variables, which have their predefined meaning. We have a special variable, which is written as \$[. This special variable is a scalar containing the first index of all arrays. Because Perl arrays have zero-based indexing, \$[will almost always be 0. But if you set \$[to 1 then all your arrays will use on-based ...
