Hysterectomy.  
Hysterectomy —  
surgery to remove your  
uterus and cervix — is  
a permanent procedure  
that causes sterility  
and ends menstrual  
periods. Hysterectomy  
is performed under  
anesthesia and  
requires  
hospitalization.  
Additional removal of  
the ovaries (bilateral  
oophorectomy) may

### Cesarean

### Hysterectomy

Hysterectomy as a treatment option for heavy menstrual bleeding is an invasive procedure which has to be reserved for women for whom other treatment options have failed or are contra-indicated.

Hysterectomy can be performed in four different surgical approaches; abdominal, vaginal, laparoscopic and robot-assisted.
