Answer: Six major steps in setting up a database for a particular enterprise are:

- Define the high level requirements of the enterprise (this step generates a document known as the system requirements specification.)
- Define a model containing all appropriate types of data and data relationships.

this book. • A

programmer or a  
layman can easily learn  
and use declarative  
query language such  
as SQL. • The efficient  
execution of any query  
is taken care by the  
database. So the  
programmer is at ease  
to write the query  
using the declarative  
query language such  
as SQL.
