Discrete Mathematical Structures: VTU by Ralph P. Grimaldi

Discrete mathematics is the study of mathematical structures that are fundamentally discrete rather than continuous. In contrast to real numbers that have the property of varying "smoothly", the objects studied in discrete mathematics - such as integers, graphs, and statements in logic [1] - do not vary smoothly in this way, but have distinct, separated values.

Discrete mathematics deals with objects that come in discrete bundles, e.g., 1 or 2 babies. In contrast, continuous mathematics deals with objects that vary continuously, e.g., 3.42 inches from a wall. Think of digital watches versus analog watches (ones where the second hand loops around continuously without stopping).

$|P \cap C| = 150 - 10 = 140$ and $|(P \cap C) - (M \cap P \cap C)| = 75 - 10 = 65$. Then the region corresponding to students taking Mathematics courses only has cardinality $300 - (90 + 10 + 140) = 60$.
