Parallel and Distributed Computing. Figure (a): is a schematic view of a typical distributed system; the system is represented as a network topology in which each node is a computer and each line connecting the nodes is a communication link. Figure (b): shows the same distributed system in more detail: each computer has its own local memory, and information can be

'Cloud computing' is the practice of using a network of remote servers hosted on the Internet to store,

manage, and process data, rather than a local server or a personal computer.

[27] The term 'Fog Computing' was defined by Prof. Jonathan Bar-Magen Numhauser in the year 2011 as part of his PhD dissertation project proposal.
