Plate tectonics refers to the slow movement of the earth's crustal plates. These plates were formed when earth's crust broke apart at the beginning of the global Flood. Due to unique geological conditions, these plates moved rapidly, reshaping earth's surface. This is known as Catastrophic Plate Tectonics (CPT).

Theory of Plate Tectonics was established by Alfred Wegener. Fossils and Mountain ranges were his evidences.. Alfred Wegener created the idea of continental drift and wrote 'The Origin of Continents and Oceans' to support his idea. His theory was rejected by geologists at first. His ideas have been scientifically proven as time goes
