Found in Translation is a rich account of language and shifting cross-cultural relations on a Christian mission in northern Australia during the mid-twentieth century. It explores how translation shaped interactions between missionaries and the Anindilyakwa-speaking people of the Groote Eylandt archipelago and how each group used language to influence, evade, or engage with the other in a series of selective “mistranslations.”

This complexity is why, for decades, machine translation required teams of domain-specific experts. You can easily imagine the squads of linguistic geniuses, huddled together for warmth, devising intricate sets of rules to transform syntax, grammar, and vocabulary between languages. But no longer. Today, neural networks autonomously learn these rules.
