phase (harness manufacturing!) and to keep an access open for any EMC design input during system integration and test verification, is to establish an overall grounding and shielding diagram early in the development phase of a space project and to continuously update it further on. Earthing/grounding and EMC: For a lot of EMC phenomena (transient disturbances, HF currents...), earthing conductors are not efficient as they are very long and the used topology means a high impedance versus HF. The only solution is meshing to get equipotentiality. Mesh size: $\pm \lambda/10$.

Practical Grounding, Bonding, Shielding and Surge

Grounding : a point in contact with the ground, a common return in an electric circuit and a arbitrary point of zero voltage potential. It also provide personal safety and protect the equipment. Control the voltages developed on the ground when the...

Practical EM Shielding. Shielded enclosures generally surround a product's circuitry on all sides. Care is taken to ensure that all apertures are small and every seam is sealed. On the other hand, it is not uncommon to find shields that don't surround the entire product. Often a shield partially covers only a few circuits.

Few topics generate as much controversy and argument as that of grounding and the associated topics of surge protection, shielding and lightning protection of electrical and electronic systems. Poor grounding practice can be the cause of continual and intermittent difficult-to-diagnose problems in a facility.

20 Practical Grounding, Bonding, Shielding and Surge Protection. On the other hand, a low-resistance grounding is designed for ground fault currents of 100 A or more with values of even 1000 A being common. The value of ground fault current is still far lower than three-phase system fault currents.

The multitude of app notes and articles on this subject that recommend grounding the shield at one end only misrepresent the physics of shielding and falsely ascribe a ground loop to the shield where the circuit itself was part of the original ground loop. Cable shielding and ground loops must be disassociated.
