The Human Voice (TV Movie 1966) - IMDb

The voice is not one single object or
organ, but rather a system that requires
the cooperation of several body parts
working in tandem. Like any other
musical instrument or sound-producing
device, the voice can be broken down
into three fundamental functions: Power
source; Vibrator; Resonating chamber;

The Human Voice. - YouTube

Voice voice is sound, vibration. For a pure clear voice, the vocal cords come together and vibrate, allowing pulses of air to leave the voice box and create a pure musical tone, That musical tone we describe in terms of pitch and volume. It comes from the larynx and we use it mainly to carry speech over a distance and we use it for emotion.

Human voice - Wikipedia

The larynx (voice box) is located behind the Adam's Apple and is composed of cartilage, muscle and mucosa. Ordinarily, human voice production consists of four parts and there is a skillful, coordinated interaction between the brain and the following parts of the vocal tract - Generator, Oscillator, Resonator and Articulator.
